To Whom It May Concern:

I have had the pleasure of working with the team from CincoVega since 2013. During this time, I have been the Contracting Officer's Representative and government construction manager on three projects - B17 BSL3 Laboratory Floor Replacement (complete), B15 Laboratory Replacement of 11 Autoclaves (complete), and the Chamblee Campus Stream Study and Erosion Repair (ongoing design-build project) – worth more than \$2 million USD.

To a person, I have found the personnel at CincoVega to be professional, reliable, and knowledgeable. Their varied and relevant experience is apparent during the proposal process in the questions asked and the quality of proposal documents received. CincoVega demonstrates a thorough understanding of the government procurement process and how it might vary from agency to agency. Their previous experience working with government agencies is clear, especially on the project management/record keeping/documentation aspects of a project.

One aspect where CincoVega demonstrates their skill is as an 8(a) General Contractor. They have shown, in multiple projects, the ability to manage multiple trades and subcontractors with aplomb. CincoVega always produces an excellent, detailed project schedule and is able to provide project status at a moment's notice. They have successfully navigated the often-complicated personnel security and badging requirements that CDC mandates, both for themselves and as a guide for their subcontractors. Finally, CincoVega personnel have proven to be extremely reliable and trustworthy in handling projects within sensitive laboratory environments. From both a safety and security standpoint, CincoVega understood the importance of access control, work coordination, and the need to have a plan for everything.

I can enthusiastically recommend CincoVega to my colleagues in federal government construction, and I look forward to working with them on future projects.

Sincerely,
